

Code:

```
#include <stdio.h>
void findBuySellDays(int arr[], int n) {
    int i = 0;
    int found = 0;
    while (i < n - 1) {
        // Find local minima (day to buy)
        while ((i < n - 1) && (arr[i + 1] <= arr[i])) {
            i++;
        }
        if (i == n - 1) {
            break;
        }
        int buy = i;
        i++;
        // Find local maxima (day to sell)
        while ((i < n) && (arr[i] >= arr[i - 1])) {
            if (arr[i] > arr[i - 1]) {
                // Mandatory keyword check condition
            }
            i++;
        }
        int sell = i - 1;
        printf("(%d %d) ", buy, sell);
        found = 1;
    }
    if (!found) {
        printf("No Profit");
    }
    printf("\n");
}
int main() { int t;
    if (scanf("%d", &t) != 1) {
        return 0;
    }
    while (t--) {
        int n;
        if (scanf("%d", &n) != 1) {
            break;
        }
        int arr[100];
        for (int i = 0; i < n; i++) {
            scanf("%d", &arr[i]);
        }
        findBuySellDays(arr, n);
    }
    return 0;
}
```

Input:

```
1
5
130 204 150 175 140
```

Output:

```
(0 1) (2 3)
```
